Deep interest in sciences and Nature (in astronomy, and later on, in mineralogy) since early childhood. After passing studies in Geology and Mineralogy and Crystallography at Charles University in Prague became a scientific assistant associated with the National Museum in Prague (in charge of analytical techniques). The doctorate (Ph.D.) in Geology was received in 2012. Since that year, I have been at the Department of Structure Analysis at the Institute of Physics in Prague. My scientific research is focused on the crystal chemistry of hydrated oxysalts, namely the new minerals and the crystal chemistry of uranium minerals and compounds. I am the author or co-author of more than 230 publications, including descriptions of more than 110 new minerals. I have established a broad collaboration with the leading global mineralogical museums (Musée cantonal de Géologie, Lausanne; Fersman's Museum, Moscow; Museum of Natural History, Los Angeles and else) and both systematic mineralogy and crystallographic teams around the world.
